

# swagger-client

---

This documentation describes the Gitea API.

This Python package is automatically generated by the [Swagger Codegen](#) project:

- API version: 1.15
- Package version: 1.0.0
- Build package: io.swagger.codegen.languages.PythonClientCodegen

## Requirements.

Python 2.7 and 3.4+

## Installation & Usage

pip install

If the python package is hosted on Github, you can install directly from Github

```
pip install git+https://github.com//.git
```

(you may need to run `pip` with root permission: `sudo pip install git+https://github.com//.git`)

Then import the package:

```
import swagger_client
```

## Setuptools

Install via [Setuptools](#).

```
python setup.py install --user
```

(or `sudo python setup.py install` to install the package for all users)

Then import the package:

```
import swagger_client
```

## Getting Started

Please follow the [installation procedure](#) and then run the following:

```
from __future__ import print_function
import time
import swagger_client
from swagger_client.rest import ApiException
from pprint import pprint

# Configure API key authorization: AccessToken
configuration = swagger_client.Configuration()
configuration.api_key['access_token'] = 'YOUR_API_KEY'
# Uncomment below to setup prefix (e.g. Bearer) for API key, if needed
# configuration.api_key_prefix['access_token'] = 'Bearer'
# Configure API key authorization: AuthorizationHeaderToken
configuration = swagger_client.Configuration()
configuration.api_key['Authorization'] = 'YOUR_API_KEY'
# Uncomment below to setup prefix (e.g. Bearer) for API key, if needed
# configuration.api_key_prefix['Authorization'] = 'Bearer'
```

```
# Configure HTTP basic authorization: BasicAuth
configuration = swagger_client.Configuration()
configuration.username = 'YOUR_USERNAME'
configuration.password = 'YOUR_PASSWORD'
# Configure API key authorization: SudoHeader
configuration = swagger_client.Configuration()
configuration.api_key['Sudo'] = 'YOUR_API_KEY'
# Uncomment below to setup prefix (e.g. Bearer) for API key, if needed
# configuration.api_key_prefix['Sudo'] = 'Bearer'
# Configure API key authorization: SudoParam
configuration = swagger_client.Configuration()
configuration.api_key['sudo'] = 'YOUR_API_KEY'
# Uncomment below to setup prefix (e.g. Bearer) for API key, if needed
# configuration.api_key_prefix['sudo'] = 'Bearer'
# Configure API key authorization: TOTPHHeader
configuration = swagger_client.Configuration()
configuration.api_key['X-GITEA-OTP'] = 'YOUR_API_KEY'
# Uncomment below to setup prefix (e.g. Bearer) for API key, if needed
# configuration.api_key_prefix['X-GITEA-OTP'] = 'Bearer'
# Configure API key authorization: Token
configuration = swagger_client.Configuration()
configuration.api_key['token'] = 'YOUR_API_KEY'
# Uncomment below to setup prefix (e.g. Bearer) for API key, if needed
# configuration.api_key_prefix['token'] = 'Bearer'

# create an instance of the API class
api_instance = swagger_client.AdminApi(swagger_client.ApiClient(configuration))
owner = 'owner_example' # str | owner of the repo
repo = 'repo_example' # str | name of the repo

try:
    # Adopt unadopted files as a repository
    api_instance.admin_adopt_repository(owner, repo)
except ApiException as e:
    print("Exception when calling AdminApi->admin_adopt_repository: %s\n" % e)
```

## Documentation for API Endpoints

All URLs are relative to <http://localhost/api/v1>

Class	Method	HTTP request	Description
<i>AdminApi</i>	<a href="#">admin_adopt_repository</a>	<b>POST</b> /admin/unadopted/{owner}/{repo}	Adopt unadopted files as a repository
<i>AdminApi</i>	<a href="#">admin_create_org</a>	<b>POST</b> /admin/users/{username}/orgs	Create an organization
<i>AdminApi</i>	<a href="#">admin_create_public_key</a>	<b>POST</b> /admin/users/{username}/keys	Add a public key on behalf of a user
<i>AdminApi</i>	<a href="#">admin_create_repo</a>	<b>POST</b> /admin/users/{username}/repos	Create a repository on behalf of a user
<i>AdminApi</i>	<a href="#">admin_create_user</a>	<b>POST</b> /admin/users	Create a user
<i>AdminApi</i>	<a href="#">admin_cron_list</a>	<b>GET</b> /admin/cron	List cron tasks
<i>AdminApi</i>	<a href="#">admin_cron_run</a>	<b>POST</b> /admin/cron/{task}	Run cron task
<i>AdminApi</i>	<a href="#">admin_delete_unadopted_repository</a>	<b>DELETE</b> /admin/unadopted/{owner}/{repo}	Delete unadopted files
<i>AdminApi</i>	<a href="#">admin_delete_user</a>	<b>DELETE</b> /admin/users/{username}	Delete a user
<i>AdminApi</i>	<a href="#">admin_delete_user_public_key</a>	<b>DELETE</b> /admin/users/{username}/keys/{id}	Delete a user's public key
<i>AdminApi</i>	<a href="#">admin_edit_user</a>	<b>PATCH</b> /admin/users/{username}	Edit an existing user

Class	Method	HTTP request	Description
<i>AdminApi</i>	<a href="#">admin_get_all_orgs</a>	<b>GET</b> /admin/orgs	List all organizations
<i>AdminApi</i>	<a href="#">admin_get_all_users</a>	<b>GET</b> /admin/users	List all users
<i>AdminApi</i>	<a href="#">admin_unadopted_list</a>	<b>GET</b> /admin/unadopted	List unadopted repositories
<i>IssueApi</i>	<a href="#">issue_add_label</a>	<b>POST</b> /repos/{owner}/{repo}/issues/{index}/labels	Add a label to an issue
<i>IssueApi</i>	<a href="#">issue_add_subscription</a>	<b>PUT</b> /repos/{owner}/{repo}/issues/{index}/subscriptions/{user}	Subscribe user to issue
<i>IssueApi</i>	<a href="#">issue_add_time</a>	<b>POST</b> /repos/{owner}/{repo}/issues/{index}/times	Add tracked time to a issue
<i>IssueApi</i>	<a href="#">issue_check_subscription</a>	<b>GET</b> /repos/{owner}/{repo}/issues/{index}/subscriptions/check	Check if user is subscribed to an issue
<i>IssueApi</i>	<a href="#">issue_clear_labels</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/{index}/labels	Remove all labels from an issue
<i>IssueApi</i>	<a href="#">issue_create_comment</a>	<b>POST</b> /repos/{owner}/{repo}/issues/{index}/comments	Add a comment to an issue
<i>IssueApi</i>	<a href="#">issue_create_issue</a>	<b>POST</b> /repos/{owner}/{repo}/issues	Create an issue. If using deadline only the date will be taken into account, and time of day ignored.
<i>IssueApi</i>	<a href="#">issue_create_label</a>	<b>POST</b> /repos/{owner}/{repo}/labels	Create a label
<i>IssueApi</i>	<a href="#">issue_create_milestone</a>	<b>POST</b> /repos/{owner}/{repo}/milestones	Create a milestone
<i>IssueApi</i>	<a href="#">issue_delete_comment</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/comments/{id}	Delete a comment
<i>IssueApi</i>	<a href="#">issue_delete_comment_deprecated</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/{index}/comments/{id}	Delete a comment
<i>IssueApi</i>	<a href="#">issue_delete_comment_reaction</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/comments/{id}/reactions	Remove a reaction from a comment of an issue
<i>IssueApi</i>	<a href="#">issue_delete_issue_reaction</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/{index}/reactions	Remove a reaction from an issue
<i>IssueApi</i>	<a href="#">issue_delete_label</a>	<b>DELETE</b> /repos/{owner}/{repo}/labels/{id}	Delete a label
<i>IssueApi</i>	<a href="#">issue_delete_milestone</a>	<b>DELETE</b> /repos/{owner}/{repo}/milestones/{id}	Delete a milestone
<i>IssueApi</i>	<a href="#">issue_delete_stop_watch</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/{index}/stopwatch/delete	Delete an issue's existing stopwatch.
<i>IssueApi</i>	<a href="#">issue_delete_subscription</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/{index}/subscriptions/{user}	Unsubscribe user from issue
<i>IssueApi</i>	<a href="#">issue_delete_time</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/{index}/times/{id}	Delete specific tracked time
<i>IssueApi</i>	<a href="#">issue_edit_comment</a>	<b>PATCH</b> /repos/{owner}/{repo}/issues/comments/{id}	Edit a comment
<i>IssueApi</i>	<a href="#">issue_edit_comment_deprecated</a>	<b>PATCH</b> /repos/{owner}/{repo}/issues/{index}/comments/{id}	Edit a comment
<i>IssueApi</i>	<a href="#">issue_edit_issue</a>	<b>PATCH</b> /repos/{owner}/{repo}/issues/{index}	Edit an issue. If using deadline only the date will be taken into account, and time of day ignored.

Class	Method	HTTP request	Description
<i>IssueApi</i>	<a href="#">issue_edit_issue_deadline</a>	<b>POST</b> /repos/{owner}/{repo}/issues/{index}/deadline	Set an issue deadline. If set to null, the deadline is deleted. If using deadline only the date will be taken into account, and time of day ignored.
<i>IssueApi</i>	<a href="#">issue_edit_label</a>	<b>PATCH</b> /repos/{owner}/{repo}/labels/{id}	Update a label
<i>IssueApi</i>	<a href="#">issue_edit_milestone</a>	<b>PATCH</b> /repos/{owner}/{repo}/milestones/{id}	Update a milestone
<i>IssueApi</i>	<a href="#">issue_get_comment</a>	<b>GET</b> /repos/{owner}/{repo}/issues/comments/{id}	Get a comment
<i>IssueApi</i>	<a href="#">issue_get_comment_reactions</a>	<b>GET</b> /repos/{owner}/{repo}/issues/comments/{id}/reactions	Get a list of reactions from a comment of an issue
<i>IssueApi</i>	<a href="#">issue_get_comments</a>	<b>GET</b> /repos/{owner}/{repo}/issues/{index}/comments	List all comments on an issue
<i>IssueApi</i>	<a href="#">issue_get_issue</a>	<b>GET</b> /repos/{owner}/{repo}/issues/{index}	Get an issue
<i>IssueApi</i>	<a href="#">issue_get_issue_reactions</a>	<b>GET</b> /repos/{owner}/{repo}/issues/{index}/reactions	Get a list reactions of an issue
<i>IssueApi</i>	<a href="#">issue_get_label</a>	<b>GET</b> /repos/{owner}/{repo}/labels/{id}	Get a single label
<i>IssueApi</i>	<a href="#">issue_get_labels</a>	<b>GET</b> /repos/{owner}/{repo}/issues/{index}/labels	Get an issue's labels
<i>IssueApi</i>	<a href="#">issue_get_milestone</a>	<b>GET</b> /repos/{owner}/{repo}/milestones/{id}	Get a milestone
<i>IssueApi</i>	<a href="#">issue_get_milestones_list</a>	<b>GET</b> /repos/{owner}/{repo}/milestones	Get all of a repository's opened milestones
<i>IssueApi</i>	<a href="#">issue_get_repo_comments</a>	<b>GET</b> /repos/{owner}/{repo}/issues/comments	List all comments in a repository
<i>IssueApi</i>	<a href="#">issue_list_issues</a>	<b>GET</b> /repos/{owner}/{repo}/issues	List a repository's issues
<i>IssueApi</i>	<a href="#">issue_list_labels</a>	<b>GET</b> /repos/{owner}/{repo}/labels	Get all of a repository's labels
<i>IssueApi</i>	<a href="#">issue_post_comment_reaction</a>	<b>POST</b> /repos/{owner}/{repo}/issues/comments/{id}/reactions	Add a reaction to a comment of an issue
<i>IssueApi</i>	<a href="#">issue_post_issue_reaction</a>	<b>POST</b> /repos/{owner}/{repo}/issues/{index}/reactions	Add a reaction to an issue
<i>IssueApi</i>	<a href="#">issue_remove_label</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/{index}/labels/{id}	Remove a label from an issue
<i>IssueApi</i>	<a href="#">issue_replace_labels</a>	<b>PUT</b> /repos/{owner}/{repo}/issues/{index}/labels	Replace an issue's labels
<i>IssueApi</i>	<a href="#">issue_reset_time</a>	<b>DELETE</b> /repos/{owner}/{repo}/issues/{index}/times	Reset a tracked time of an issue
<i>IssueApi</i>	<a href="#">issue_search_issues</a>	<b>GET</b> /repos/issues/search	Search for issues across the repositories that the user has access to

Class	Method	HTTP request	Description
<i>IssueApi</i>	<a href="#">issue_start_stop_watch</a>	<b>POST</b> /repos/{owner}/{repo}/issues/{index}/stopwatch/start	Start stopwatch on an issue.
<i>IssueApi</i>	<a href="#">issue_stop_stop_watch</a>	<b>POST</b> /repos/{owner}/{repo}/issues/{index}/stopwatch/stop	Stop an issue's existing stopwatch.
<i>IssueApi</i>	<a href="#">issue_subscriptions</a>	<b>GET</b> /repos/{owner}/{repo}/issues/{index}/subscriptions	Get users who subscribed on an issue.
<i>IssueApi</i>	<a href="#">issue_tracked_times</a>	<b>GET</b> /repos/{owner}/{repo}/issues/{index}/times	List an issue's tracked times
<i>MiscellaneousApi</i>	<a href="#">get_signing_key</a>	<b>GET</b> /signing-key.gpg	Get default signing-key.gpg
<i>MiscellaneousApi</i>	<a href="#">get_version</a>	<b>GET</b> /version	Returns the version of the Gitea application
<i>MiscellaneousApi</i>	<a href="#">render_markdown</a>	<b>POST</b> /markdown	Render a markdown document as HTML
<i>MiscellaneousApi</i>	<a href="#">render_markdown_raw</a>	<b>POST</b> /markdown/raw	Render raw markdown as HTML
<i>NotificationApi</i>	<a href="#">notify_get_list</a>	<b>GET</b> /notifications	List users's notification threads
<i>NotificationApi</i>	<a href="#">notify_get_repo_list</a>	<b>GET</b> /repos/{owner}/{repo}/notifications	List users's notification threads on a specific repo
<i>NotificationApi</i>	<a href="#">notify_get_thread</a>	<b>GET</b> /notifications/threads/{id}	Get notification thread by ID
<i>NotificationApi</i>	<a href="#">notify_new_available</a>	<b>GET</b> /notifications/new	Check if unread notifications exist
<i>NotificationApi</i>	<a href="#">notify_read_list</a>	<b>PUT</b> /notifications	Mark notification threads as read, pinned or unread
<i>NotificationApi</i>	<a href="#">notify_read_repo_list</a>	<b>PUT</b> /repos/{owner}/{repo}/notifications	Mark notification threads as read, pinned or unread on a specific repo
<i>NotificationApi</i>	<a href="#">notify_read_thread</a>	<b>PATCH</b> /notifications/threads/{id}	Mark notification thread as read by ID
<i>OrganizationApi</i>	<a href="#">create_org_repo</a>	<b>POST</b> /orgs/{org}/repos	Create a repository in an organization
<i>OrganizationApi</i>	<a href="#">create_org_repo_deprecated</a>	<b>POST</b> /org/{org}/repos	Create a repository in an organization
<i>OrganizationApi</i>	<a href="#">org_add_team_member</a>	<b>PUT</b> /teams/{id}/members/{username}	Add a team member
<i>OrganizationApi</i>	<a href="#">org_add_team_repository</a>	<b>PUT</b> /teams/{id}/repos/{org}/{repo}	Add a repository to a team
<i>OrganizationApi</i>	<a href="#">org_conceal_member</a>	<b>DELETE</b> /orgs/{org}/public_members/{username}	Conceal a user's membership

Class	Method	HTTP request	Description
OrganizationApi	<a href="#">org_create</a>	<b>POST</b> /orgs	Create an organization
OrganizationApi	<a href="#">org_create_hook</a>	<b>POST</b> /orgs/{org}/hooks/	Create a hook
OrganizationApi	<a href="#">org_create_label</a>	<b>POST</b> /orgs/{org}/labels	Create a label for an organization
OrganizationApi	<a href="#">org_create_team</a>	<b>POST</b> /orgs/{org}/teams	Create a team
OrganizationApi	<a href="#">org_delete</a>	<b>DELETE</b> /orgs/{org}	Delete an organization
OrganizationApi	<a href="#">org_delete_hook</a>	<b>DELETE</b> /orgs/{org}/hooks/{id}	Delete a hook
OrganizationApi	<a href="#">org_delete_label</a>	<b>DELETE</b> /orgs/{org}/labels/{id}	Delete a label
OrganizationApi	<a href="#">org_delete_member</a>	<b>DELETE</b> /orgs/{org}/members/{username}	Remove a member from an organization
OrganizationApi	<a href="#">org_delete_team</a>	<b>DELETE</b> /teams/{id}	Delete a team
OrganizationApi	<a href="#">org_edit</a>	<b>PATCH</b> /orgs/{org}	Edit an organization
OrganizationApi	<a href="#">org_edit_hook</a>	<b>PATCH</b> /orgs/{org}/hooks/{id}	Update a hook
OrganizationApi	<a href="#">org_edit_label</a>	<b>PATCH</b> /orgs/{org}/labels/{id}	Update a label
OrganizationApi	<a href="#">org_edit_team</a>	<b>PATCH</b> /teams/{id}	Edit a team
OrganizationApi	<a href="#">org_get</a>	<b>GET</b> /orgs/{org}	Get an organization
OrganizationApi	<a href="#">org_get_all</a>	<b>GET</b> /orgs	Get list of organizations
OrganizationApi	<a href="#">org_get_hook</a>	<b>GET</b> /orgs/{org}/hooks/{id}	Get a hook
OrganizationApi	<a href="#">org_get_label</a>	<b>GET</b> /orgs/{org}/labels/{id}	Get a single label
OrganizationApi	<a href="#">org_get_team</a>	<b>GET</b> /teams/{id}	Get a team
OrganizationApi	<a href="#">org_is_member</a>	<b>GET</b> /orgs/{org}/members/{username}	Check if a user is a member of an organization
OrganizationApi	<a href="#">org_is_public_member</a>	<b>GET</b> /orgs/{org}/public_members/{username}	Check if a user is a public member of an organization
OrganizationApi	<a href="#">org_list_current_user_orgs</a>	<b>GET</b> /user/orgs	List the current user's organizations
OrganizationApi	<a href="#">org_list_hooks</a>	<b>GET</b> /orgs/{org}/hooks	List an organization's webhooks
OrganizationApi	<a href="#">org_list_labels</a>	<b>GET</b> /orgs/{org}/labels	List an organization's labels
OrganizationApi	<a href="#">org_list_members</a>	<b>GET</b> /orgs/{org}/members	List an organization's members
OrganizationApi	<a href="#">org_list_public_members</a>	<b>GET</b> /orgs/{org}/public_members	List an organization's public members

Class	Method	HTTP request	Description
<i>OrganizationApi</i>	<a href="#">org_list_repos</a>	<b>GET</b> /orgs/{org}/repos	List an organization's repos
<i>OrganizationApi</i>	<a href="#">org_list_team_member</a>	<b>GET</b> /teams/{id}/members/{username}	List a particular member of team
<i>OrganizationApi</i>	<a href="#">org_list_team_members</a>	<b>GET</b> /teams/{id}/members	List a team's members
<i>OrganizationApi</i>	<a href="#">org_list_team_repos</a>	<b>GET</b> /teams/{id}/repos	List a team's repos
<i>OrganizationApi</i>	<a href="#">org_list_teams</a>	<b>GET</b> /orgs/{org}/teams	List an organization's teams
<i>OrganizationApi</i>	<a href="#">org_list_user_orgs</a>	<b>GET</b> /users/{username}/orgs	List a user's organizations
<i>OrganizationApi</i>	<a href="#">org_publicize_member</a>	<b>PUT</b> /orgs/{org}/public_members/{username}	Publicize a user's membership
<i>OrganizationApi</i>	<a href="#">org_remove_team_member</a>	<b>DELETE</b> /teams/{id}/members/{username}	Remove a team member
<i>OrganizationApi</i>	<a href="#">org_remove_team_repository</a>	<b>DELETE</b> /teams/{id}/repos/{org}/{repo}	Remove a repository from a team
<i>OrganizationApi</i>	<a href="#">team_search</a>	<b>GET</b> /orgs/{org}/teams/search	Search for teams within an organization
<i>RepositoryApi</i>	<a href="#">create_current_user_repo</a>	<b>POST</b> /user/repos	Create a repository
<i>RepositoryApi</i>	<a href="#">create_fork</a>	<b>POST</b> /repos/{owner}/{repo}/forks	Fork a repository
<i>RepositoryApi</i>	<a href="#">get_annotated_tag</a>	<b>GET</b> /repos/{owner}/{repo}/git/tags/{sha}	Gets the tag object of an annotated tag (not lightweight tags)
<i>RepositoryApi</i>	<a href="#">get_blob</a>	<b>GET</b> /repos/{owner}/{repo}/git/blobs/{sha}	Gets the blob of a repository.
<i>RepositoryApi</i>	<a href="#">get_tree</a>	<b>GET</b> /repos/{owner}/{repo}/git/trees/{sha}	Gets the tree of a repository.
<i>RepositoryApi</i>	<a href="#">list_forks</a>	<b>GET</b> /repos/{owner}/{repo}/forks	List a repository's forks
<i>RepositoryApi</i>	<a href="#">repo_add_collaborator</a>	<b>PUT</b> /repos/{owner}/{repo}/collaborators/{collaborator}	Add a collaborator to a repository
<i>RepositoryApi</i>	<a href="#">repo_add_team</a>	<b>PUT</b> /repos/{owner}/{repo}/teams/{team}	Add a team to a repository
<i>RepositoryApi</i>	<a href="#">repo_add_topc</a>	<b>PUT</b> /repos/{owner}/{repo}/topics/{topic}	Add a topic to a repository
<i>RepositoryApi</i>	<a href="#">repo_check_collaborator</a>	<b>GET</b> /repos/{owner}/{repo}/collaborators/{collaborator}	Check if a user is a collaborator of a repository
<i>RepositoryApi</i>	<a href="#">repo_check_team</a>	<b>GET</b> /repos/{owner}/{repo}/teams/{team}	Check if a team is assigned to a repository
<i>RepositoryApi</i>	<a href="#">repo_create_branch</a>	<b>POST</b> /repos/{owner}/{repo}/branches	Create a branch

Class	Method	HTTP request	Description
<i>RepositoryApi</i>	<a href="#">repo_create_branch_protection</a>	<b>POST</b> /repos/{owner}/{repo}/branch_protections	Create a branch protections for a repository
<i>RepositoryApi</i>	<a href="#">repo_create_file</a>	<b>POST</b> /repos/{owner}/{repo}/contents/{filepath}	Create a file in a repository
<i>RepositoryApi</i>	<a href="#">repo_create_hook</a>	<b>POST</b> /repos/{owner}/{repo}/hooks	Create a hook
<i>RepositoryApi</i>	<a href="#">repo_create_key</a>	<b>POST</b> /repos/{owner}/{repo}/keys	Add a key to a repository
<i>RepositoryApi</i>	<a href="#">repo_create_pull_request</a>	<b>POST</b> /repos/{owner}/{repo}/pulls	Create a pull request
<i>RepositoryApi</i>	<a href="#">repo_create_pull_review</a>	<b>POST</b> /repos/{owner}/{repo}/pulls/{index}/reviews	Create a review to an pull request
<i>RepositoryApi</i>	<a href="#">repo_create_pull_review_requests</a>	<b>POST</b> /repos/{owner}/{repo}/pulls/{index}/requested_reviewers	create review requests for a pull request
<i>RepositoryApi</i>	<a href="#">repo_create_release</a>	<b>POST</b> /repos/{owner}/{repo}/releases	Create a release
<i>RepositoryApi</i>	<a href="#">repo_create_release_attachment</a>	<b>POST</b> /repos/{owner}/{repo}/releases/{id}/assets	Create a release attachment
<i>RepositoryApi</i>	<a href="#">repo_create_status</a>	<b>POST</b> /repos/{owner}/{repo}/statuses/{sha}	Create a commit status
<i>RepositoryApi</i>	<a href="#">repo_create_tag</a>	<b>POST</b> /repos/{owner}/{repo}/tags	Create a new git tag in a repository
<i>RepositoryApi</i>	<a href="#">repo_delete</a>	<b>DELETE</b> /repos/{owner}/{repo}	Delete a repository
<i>RepositoryApi</i>	<a href="#">repo_delete_branch</a>	<b>DELETE</b> /repos/{owner}/{repo}/branches/{branch}	Delete a specific branch from a repository
<i>RepositoryApi</i>	<a href="#">repo_delete_branch_protection</a>	<b>DELETE</b> /repos/{owner}/{repo}/branch_protections/{name}	Delete a specific branch protection for the repository
<i>RepositoryApi</i>	<a href="#">repo_delete_collaborator</a>	<b>DELETE</b> /repos/{owner}/{repo}/collaborators/{collaborator}	Delete a collaborator from a repository
<i>RepositoryApi</i>	<a href="#">repo_delete_file</a>	<b>DELETE</b> /repos/{owner}/{repo}/contents/{filepath}	Delete a file in a repository
<i>RepositoryApi</i>	<a href="#">repo_delete_git_hook</a>	<b>DELETE</b> /repos/{owner}/{repo}/hooks/git/{id}	Delete a Git hook in a repository
<i>RepositoryApi</i>	<a href="#">repo_delete_hook</a>	<b>DELETE</b> /repos/{owner}/{repo}/hooks/{id}	Delete a hook in a repository
<i>RepositoryApi</i>	<a href="#">repo_delete_key</a>	<b>DELETE</b> /repos/{owner}/{repo}/keys/{id}	Delete a key from a repository
<i>RepositoryApi</i>	<a href="#">repo_delete_pull_review</a>	<b>DELETE</b> /repos/{owner}/{repo}/pulls/{index}/reviews/{id}	Delete a specific review from a pull request
<i>RepositoryApi</i>	<a href="#">repo_delete_pull_review_requests</a>	<b>DELETE</b> /repos/{owner}/{repo}/pulls/{index}/requested_reviewers	cancel review requests for a pull request
<i>RepositoryApi</i>	<a href="#">repo_delete_release</a>	<b>DELETE</b> /repos/{owner}/{repo}/releases/{id}	Delete a release
<i>RepositoryApi</i>	<a href="#">repo_delete_release_attachment</a>	<b>DELETE</b> /repos/{owner}/{repo}/releases/{id}/assets/{attachment_id}	Delete a release attachment

Class	Method	HTTP request	Description
<i>RepositoryApi</i>	<a href="#">repo_delete_release_by_tag</a>	<b>DELETE</b> /repos/{owner}/{repo}/releases/tags/{tag}	Delete a release by tag name
<i>RepositoryApi</i>	<a href="#">repo_delete_tag</a>	<b>DELETE</b> /repos/{owner}/{repo}/tags/{tag}	Delete a repository's tag by name
<i>RepositoryApi</i>	<a href="#">repo_delete_team</a>	<b>DELETE</b> /repos/{owner}/{repo}/teams/{team}	Delete a team from a repository
<i>RepositoryApi</i>	<a href="#">repo_delete_topic</a>	<b>DELETE</b> /repos/{owner}/{repo}/topics/{topic}	Delete a topic from a repository
<i>RepositoryApi</i>	<a href="#">repo_dismiss_pull_review</a>	<b>POST</b> /repos/{owner}/{repo}/pulls/{index}/reviews/{id}/dismissals	Dismiss a review for a pull request
<i>RepositoryApi</i>	<a href="#">repo_download_pull_diff</a>	<b>GET</b> /repos/{owner}/{repo}/pulls/{index}.diff	Get a pull request diff
<i>RepositoryApi</i>	<a href="#">repo_download_pull_patch</a>	<b>GET</b> /repos/{owner}/{repo}/pulls/{index}.patch	Get a pull request patch file
<i>RepositoryApi</i>	<a href="#">repo_edit</a>	<b>PATCH</b> /repos/{owner}/{repo}	Edit a repository's properties. Only fields that are set will be changed.
<i>RepositoryApi</i>	<a href="#">repo_edit_branch_protection</a>	<b>PATCH</b> /repos/{owner}/{repo}/branch_protections/{name}	Edit a branch protections for a repository. Only fields that are set will be changed
<i>RepositoryApi</i>	<a href="#">repo_edit_git_hook</a>	<b>PATCH</b> /repos/{owner}/{repo}/hooks/git/{id}	Edit a Git hook in a repository
<i>RepositoryApi</i>	<a href="#">repo_edit_hook</a>	<b>PATCH</b> /repos/{owner}/{repo}/hooks/{id}	Edit a hook in a repository
<i>RepositoryApi</i>	<a href="#">repo_edit_pull_request</a>	<b>PATCH</b> /repos/{owner}/{repo}/pulls/{index}	Update a pull request. If using deadline only the date will be taken into account, and time of day ignored.
<i>RepositoryApi</i>	<a href="#">repo_edit_release</a>	<b>PATCH</b> /repos/{owner}/{repo}/releases/{id}	Update a release
<i>RepositoryApi</i>	<a href="#">repo_edit_release_attachment</a>	<b>PATCH</b> /repos/{owner}/{repo}/releases/{id}/assets/{attachment_id}	Edit a release attachment
<i>RepositoryApi</i>	<a href="#">repo_get</a>	<b>GET</b> /repos/{owner}/{repo}	Get a repository
<i>RepositoryApi</i>	<a href="#">repo_get_all_commits</a>	<b>GET</b> /repos/{owner}/{repo}/commits	Get a list of all commits from a repository
<i>RepositoryApi</i>	<a href="#">repo_get_archive</a>	<b>GET</b> /repos/{owner}/{repo}/archive/{archive}	Get an archive of a repository
<i>RepositoryApi</i>	<a href="#">repo_get_assignees</a>	<b>GET</b> /repos/{owner}/{repo}/assignees	Return all users that have write access and can be assigned to issues

Class	Method	HTTP request	Description
<i>RepositoryApi</i>	<a href="#">repo_get_branch</a>	<b>GET</b> /repos/{owner}/{repo}/branches/{branch}	Retrieve a specific branch from a repository, including its effective branch protection
<i>RepositoryApi</i>	<a href="#">repo_get_branch_protection</a>	<b>GET</b> /repos/{owner}/{repo}/branch_protections/{name}	Get a specific branch protection for the repository
<i>RepositoryApi</i>	<a href="#">repo_get_by_id</a>	<b>GET</b> /repositories/{id}	Get a repository by id
<i>RepositoryApi</i>	<a href="#">repo_get_combined_status_by_ref</a>	<b>GET</b> /repos/{owner}/{repo}/commits/{ref}/status	Get a commit's combined status, by branch/tag/commit reference
<i>RepositoryApi</i>	<a href="#">repo_get_contents</a>	<b>GET</b> /repos/{owner}/{repo}/contents/{filepath}	Gets the metadata and contents (if a file) of an entry in a repository, or a list of entries if a dir
<i>RepositoryApi</i>	<a href="#">repo_get_contents_list</a>	<b>GET</b> /repos/{owner}/{repo}/contents	Gets the metadata of all the entries of the root dir
<i>RepositoryApi</i>	<a href="#">repo_get_editor_config</a>	<b>GET</b> /repos/{owner}/{repo}/editorconfig/{filepath}	Get the EditorConfig definitions of a file in a repository
<i>RepositoryApi</i>	<a href="#">repo_get_git_hook</a>	<b>GET</b> /repos/{owner}/{repo}/hooks/git/{id}	Get a Git hook
<i>RepositoryApi</i>	<a href="#">repo_get_hook</a>	<b>GET</b> /repos/{owner}/{repo}/hooks/{id}	Get a hook
<i>RepositoryApi</i>	<a href="#">repo_get_issue_templates</a>	<b>GET</b> /repos/{owner}/{repo}/issue_templates	Get available issue templates for a repository
<i>RepositoryApi</i>	<a href="#">repo_get_key</a>	<b>GET</b> /repos/{owner}/{repo}/keys/{id}	Get a repository's key by id
<i>RepositoryApi</i>	<a href="#">repo_get_languages</a>	<b>GET</b> /repos/{owner}/{repo}/languages	Get languages and number of bytes of code written
<i>RepositoryApi</i>	<a href="#">repo_get_pull_request</a>	<b>GET</b> /repos/{owner}/{repo}/pulls/{index}	Get a pull request
<i>RepositoryApi</i>	<a href="#">repo_get_pull_review</a>	<b>GET</b> /repos/{owner}/{repo}/pulls/{index}/reviews/{id}	Get a specific review for a pull request
<i>RepositoryApi</i>	<a href="#">repo_get_pull_review_comments</a>	<b>GET</b> /repos/{owner}/{repo}/pulls/{index}/reviews/{id}/comments	Get a specific review for a pull request
<i>RepositoryApi</i>	<a href="#">repo_get_raw_file</a>	<b>GET</b> /repos/{owner}/{repo}/raw/{filepath}	Get a file from a repository
<i>RepositoryApi</i>	<a href="#">repo_get_release</a>	<b>GET</b> /repos/{owner}/{repo}/releases/{id}	Get a release
<i>RepositoryApi</i>	<a href="#">repo_get_release_attachment</a>	<b>GET</b> /repos/{owner}/{repo}/releases/{id}/assets/{attachment_id}	Get a release attachment
<i>RepositoryApi</i>	<a href="#">repo_get_release_by_tag</a>	<b>GET</b> /repos/{owner}/{repo}/releases/tags/{tag}	Get a release by tag name

Class	Method	HTTP request	Description
<i>RepositoryApi</i>	<a href="#">repo_get_reviewers</a>	<b>GET</b> /repos/{owner}/{repo}/reviewers	Return all users that can be requested to review in this repo
<i>RepositoryApi</i>	<a href="#">repo_get_single_commit</a>	<b>GET</b> /repos/{owner}/{repo}/git/commits/{sha}	Get a single commit from a repository
<i>RepositoryApi</i>	<a href="#">repo_get_tag</a>	<b>GET</b> /repos/{owner}/{repo}/tags/{tag}	Get the tag of a repository by tag name
<i>RepositoryApi</i>	<a href="#">repo_list_all_git_refs</a>	<b>GET</b> /repos/{owner}/{repo}/git/refs	Get specified ref or filtered repository's refs
<i>RepositoryApi</i>	<a href="#">repo_list_branch_protection</a>	<b>GET</b> /repos/{owner}/{repo}/branch_protections	List branch protections for a repository
<i>RepositoryApi</i>	<a href="#">repo_list_branches</a>	<b>GET</b> /repos/{owner}/{repo}/branches	List a repository's branches
<i>RepositoryApi</i>	<a href="#">repo_list_collaborators</a>	<b>GET</b> /repos/{owner}/{repo}/collaborators	List a repository's collaborators
<i>RepositoryApi</i>	<a href="#">repo_list_git_hooks</a>	<b>GET</b> /repos/{owner}/{repo}/hooks/git	List the Git hooks in a repository
<i>RepositoryApi</i>	<a href="#">repo_list_git_refs</a>	<b>GET</b> /repos/{owner}/{repo}/git/refs/{ref}	Get specified ref or filtered repository's refs
<i>RepositoryApi</i>	<a href="#">repo_list_hooks</a>	<b>GET</b> /repos/{owner}/{repo}/hooks	List the hooks in a repository
<i>RepositoryApi</i>	<a href="#">repo_list_keys</a>	<b>GET</b> /repos/{owner}/{repo}/keys	List a repository's keys
<i>RepositoryApi</i>	<a href="#">repo_list_pull_requests</a>	<b>GET</b> /repos/{owner}/{repo}/pulls	List a repo's pull requests
<i>RepositoryApi</i>	<a href="#">repo_list_pull_reviews</a>	<b>GET</b> /repos/{owner}/{repo}/pulls/{index}/reviews	List all reviews for a pull request
<i>RepositoryApi</i>	<a href="#">repo_list_release_attachments</a>	<b>GET</b> /repos/{owner}/{repo}/releases/{id}/assets	List release's attachments
<i>RepositoryApi</i>	<a href="#">repo_list_releases</a>	<b>GET</b> /repos/{owner}/{repo}/releases	List a repo's releases
<i>RepositoryApi</i>	<a href="#">repo_list_stargazers</a>	<b>GET</b> /repos/{owner}/{repo}/stargazers	List a repo's stargazers
<i>RepositoryApi</i>	<a href="#">repo_list_statuses</a>	<b>GET</b> /repos/{owner}/{repo}/statuses/{sha}	Get a commit's statuses
<i>RepositoryApi</i>	<a href="#">repo_list_statuses_by_ref</a>	<b>GET</b> /repos/{owner}/{repo}/commits/{ref}/statuses	Get a commit's statuses, by branch/tag/commit reference
<i>RepositoryApi</i>	<a href="#">repo_list_subscribers</a>	<b>GET</b> /repos/{owner}/{repo}/subscribers	List a repo's watchers
<i>RepositoryApi</i>	<a href="#">repo_list_tags</a>	<b>GET</b> /repos/{owner}/{repo}/tags	List a repository's tags
<i>RepositoryApi</i>	<a href="#">repo_list_teams</a>	<b>GET</b> /repos/{owner}/{repo}/teams	List a repository's teams

Class	Method	HTTP request	Description
<i>RepositoryApi</i>	<a href="#">repo_list_topics</a>	<b>GET</b> /repos/{owner}/{repo}/topics	Get list of topics that a repository has
<i>RepositoryApi</i>	<a href="#">repo_merge_pull_request</a>	<b>POST</b> /repos/{owner}/{repo}/pulls/{index}/merge	Merge a pull request
<i>RepositoryApi</i>	<a href="#">repo_migrate</a>	<b>POST</b> /repos/migrate	Migrate a remote git repository
<i>RepositoryApi</i>	<a href="#">repo_mirror_sync</a>	<b>POST</b> /repos/{owner}/{repo}/mirror-sync	Sync a mirrored repository
<i>RepositoryApi</i>	<a href="#">repo_pull_request_is_merged</a>	<b>GET</b> /repos/{owner}/{repo}/pulls/{index}/merge	Check if a pull request has been merged
<i>RepositoryApi</i>	<a href="#">repo_search</a>	<b>GET</b> /repos/search	Search for repositories
<i>RepositoryApi</i>	<a href="#">repo_signing_key</a>	<b>GET</b> /repos/{owner}/{repo}/signing-key.gpg	Get signing-key.gpg for given repository
<i>RepositoryApi</i>	<a href="#">repo_submit_pull_review</a>	<b>POST</b> /repos/{owner}/{repo}/pulls/{index}/reviews/{id}	Submit a pending review to an pull request
<i>RepositoryApi</i>	<a href="#">repo_test_hook</a>	<b>POST</b> /repos/{owner}/{repo}/hooks/{id}/tests	Test a push webhook
<i>RepositoryApi</i>	<a href="#">repo_tracked_times</a>	<b>GET</b> /repos/{owner}/{repo}/times	List a repo's tracked times
<i>RepositoryApi</i>	<a href="#">repo_transfer</a>	<b>POST</b> /repos/{owner}/{repo}/transfer	Transfer a repo ownership
<i>RepositoryApi</i>	<a href="#">repo_un_dismiss_pull_review</a>	<b>POST</b> /repos/{owner}/{repo}/pulls/{index}/reviews/{id}/undismissals	Cancel to dismiss a review for a pull request
<i>RepositoryApi</i>	<a href="#">repo_update_file</a>	<b>PUT</b> /repos/{owner}/{repo}/contents/{filepath}	Update a file in a repository
<i>RepositoryApi</i>	<a href="#">repo_update_pull_request</a>	<b>POST</b> /repos/{owner}/{repo}/pulls/{index}/update	Merge PR's baseBranch into headBranch
<i>RepositoryApi</i>	<a href="#">repo_update_topics</a>	<b>PUT</b> /repos/{owner}/{repo}/topics	Replace list of topics for a repository
<i>RepositoryApi</i>	<a href="#">topic_search</a>	<b>GET</b> /topics/search	search topics via keyword
<i>RepositoryApi</i>	<a href="#">user_current_check_subscription</a>	<b>GET</b> /repos/{owner}/{repo}/subscription	Check if the current user is watching a repo
<i>RepositoryApi</i>	<a href="#">user_current_delete_subscription</a>	<b>DELETE</b> /repos/{owner}/{repo}/subscription	Unwatch a repo
<i>RepositoryApi</i>	<a href="#">user_current_put_subscription</a>	<b>PUT</b> /repos/{owner}/{repo}/subscription	Watch a repo
<i>RepositoryApi</i>	<a href="#">user_tracked_times</a>	<b>GET</b> /repos/{owner}/{repo}/times/{user}	List a user's tracked times in a repo
<i>SettingsApi</i>	<a href="#">get_general_api_settings</a>	<b>GET</b> /settings/api	Get instance's global settings for api

Class	Method	HTTP request	Description
<i>SettingsApi</i>	<a href="#">get_general_attachment_settings</a>	<b>GET</b> /settings/attachment	Get instance's global settings for Attachment
<i>SettingsApi</i>	<a href="#">get_general_repository_settings</a>	<b>GET</b> /settings/repository	Get instance's global settings for repositories
<i>SettingsApi</i>	<a href="#">get_general_ui_settings</a>	<b>GET</b> /settings/ui	Get instance's global settings for ui
<i>UserApi</i>	<a href="#">create_current_user_repo</a>	<b>POST</b> /user/repos	Create a repository
<i>UserApi</i>	<a href="#">get_user_settings</a>	<b>GET</b> /user/settings	Get user settings
<i>UserApi</i>	<a href="#">update_user_settings</a>	<b>PATCH</b> /user/settings	Update user settings
<i>UserApi</i>	<a href="#">user_add_email</a>	<b>POST</b> /user/emails	Add email addresses
<i>UserApi</i>	<a href="#">user_check_following</a>	<b>GET</b> /users/{follower}/following/{followee}	Check if one user is following another user
<i>UserApi</i>	<a href="#">user_create_oauth2_application</a>	<b>POST</b> /user/applications/oauth2	creates a new OAuth2 application
<i>UserApi</i>	<a href="#">user_create_token</a>	<b>POST</b> /users/{username}/tokens	Create an access token
<i>UserApi</i>	<a href="#">user_current_check_following</a>	<b>GET</b> /user/following/{username}	Check whether a user is followed by the authenticated user
<i>UserApi</i>	<a href="#">user_current_check_starring</a>	<b>GET</b> /user/starred/{owner}/{repo}	Whether the authenticated is starring the repo
<i>UserApi</i>	<a href="#">user_current_delete_follow</a>	<b>DELETE</b> /user/following/{username}	Unfollow a user
<i>UserApi</i>	<a href="#">user_current_delete_gpg_key</a>	<b>DELETE</b> /user/gpg_keys/{id}	Remove a GPG key
<i>UserApi</i>	<a href="#">user_current_delete_key</a>	<b>DELETE</b> /user/keys/{id}	Delete a public key
<i>UserApi</i>	<a href="#">user_current_delete_star</a>	<b>DELETE</b> /user/starred/{owner}/{repo}	Unstar the given repo
<i>UserApi</i>	<a href="#">user_current_get_gpg_key</a>	<b>GET</b> /user/gpg_keys/{id}	Get a GPG key
<i>UserApi</i>	<a href="#">user_current_get_key</a>	<b>GET</b> /user/keys/{id}	Get a public key
<i>UserApi</i>	<a href="#">user_current_list_followers</a>	<b>GET</b> /user/followers	List the authenticated user's followers
<i>UserApi</i>	<a href="#">user_current_list_following</a>	<b>GET</b> /user/following	List the users that the authenticated user is following
<i>UserApi</i>	<a href="#">user_current_list_gpg_keys</a>	<b>GET</b> /user/gpg_keys	List the authenticated user's GPG keys
<i>UserApi</i>	<a href="#">user_current_list_keys</a>	<b>GET</b> /user/keys	List the authenticated user's public keys

Class	Method	HTTP request	Description
<i>UserApi</i>	<a href="#">user_current_list_repos</a>	<b>GET</b> /user/repos	List the repos that the authenticated user owns or has access to
<i>UserApi</i>	<a href="#">user_current_list_starred</a>	<b>GET</b> /user/starred	The repos that the authenticated user has starred
<i>UserApi</i>	<a href="#">user_current_list_subscriptions</a>	<b>GET</b> /user/subscriptions	List repositories watched by the authenticated user
<i>UserApi</i>	<a href="#">user_current_post_gpg_key</a>	<b>POST</b> /user/gpg_keys	Create a GPG key
<i>UserApi</i>	<a href="#">user_current_post_key</a>	<b>POST</b> /user/keys	Create a public key
<i>UserApi</i>	<a href="#">user_current_put_follow</a>	<b>PUT</b> /user/following/{username}	Follow a user
<i>UserApi</i>	<a href="#">user_current_put_star</a>	<b>PUT</b> /user/starred/{owner}/{repo}	Star the given repo
<i>UserApi</i>	<a href="#">user_current_tracked_times</a>	<b>GET</b> /user/times	List the current user's tracked times
<i>UserApi</i>	<a href="#">user_delete_access_token</a>	<b>DELETE</b> /users/{username}/tokens/{token}	delete an access token
<i>UserApi</i>	<a href="#">user_delete_email</a>	<b>DELETE</b> /user/emails	Delete email addresses
<i>UserApi</i>	<a href="#">user_delete_o_auth2_application</a>	<b>DELETE</b> /user/applications/oauth2/{id}	delete an OAuth2 Application
<i>UserApi</i>	<a href="#">user_get</a>	<b>GET</b> /users/{username}	Get a user
<i>UserApi</i>	<a href="#">user_get_current</a>	<b>GET</b> /user	Get the authenticated user
<i>UserApi</i>	<a href="#">user_get_heatmap_data</a>	<b>GET</b> /users/{username}/heatmap	Get a user's heatmap
<i>UserApi</i>	<a href="#">user_get_o_auth2_application</a>	<b>GET</b> /user/applications/oauth2/{id}	get an OAuth2 Application
<i>UserApi</i>	<a href="#">user_get_oauth2_application</a>	<b>GET</b> /user/applications/oauth2	List the authenticated user's oauth2 applications
<i>UserApi</i>	<a href="#">user_get_stop_watches</a>	<b>GET</b> /user/stopwatches	Get list of all existing stopwatches
<i>UserApi</i>	<a href="#">user_get_tokens</a>	<b>GET</b> /users/{username}/tokens	List the authenticated user's access tokens
<i>UserApi</i>	<a href="#">user_list_emails</a>	<b>GET</b> /user/emails	List the authenticated user's email addresses
<i>UserApi</i>	<a href="#">user_list_followers</a>	<b>GET</b> /users/{username}/followers	List the given user's followers
<i>UserApi</i>	<a href="#">user_list_following</a>	<b>GET</b> /users/{username}/following	List the users that the given user is following

Class	Method	HTTP request	Description
<i>UserApi</i>	<a href="#">user_list_gpg_keys</a>	<b>GET</b> /users/{username}/gpg_keys	List the given user's GPG keys
<i>UserApi</i>	<a href="#">user_list_keys</a>	<b>GET</b> /users/{username}/keys	List the given user's public keys
<i>UserApi</i>	<a href="#">user_list_repos</a>	<b>GET</b> /users/{username}/repos	List the repos owned by the given user
<i>UserApi</i>	<a href="#">user_list_starred</a>	<b>GET</b> /users/{username}/starred	The repos that the given user has starred
<i>UserApi</i>	<a href="#">user_list_subscriptions</a>	<b>GET</b> /users/{username}/subscriptions	List the repositories watched by a user
<i>UserApi</i>	<a href="#">user_list_teams</a>	<b>GET</b> /user/teams	List all the teams a user belongs to
<i>UserApi</i>	<a href="#">user_search</a>	<b>GET</b> /users/search	Search for users
<i>UserApi</i>	<a href="#">user_update_oauth2_application</a>	<b>PATCH</b> /user/applications/oauth2/{id}	update an OAuth2 Application, this includes regenerating the client secret
